

Kenexa/BrassRing default API keys for Facebook and Twitter

It is recommended that clients use our default API keys for Facebook and Twitter. For Facebook, note that this cannot be done for Talent Gateways that use vanity URLs or Akamai, or if the client uses the China data center. In that case, a client needs to create their own Facebook APP which will require review and approval from Facebook. Contact Trina Sheppard for instructions on creating the Facebook App and the review process.

Instructions: If no social media keys are entered, then the default APIs will automatically be used. However, if you would like to utilize source codes, then API keys are required, therefore the following can be entered into all three API key spaces in order to use the default keys. Make sure to copy and paste the information below for the appropriate environment and data center of the client.
