

## Developer perspective series: How you can get started with IBM Blockchain 07/26/16

[ MUSIC ]

Dale Avery: Go sign up for an account on Bluemix, go provision an instance of the Blockchain service, and then go over to [github.com/ibm-blockchain](https://github.com/ibm-blockchain) and you can see all of our demos.

We've got tutorials that help you learn how to write smart contracts -- or, we call them chaincode.

We've got demos that show you how you could build an application that uses a blockchain network.

So, this technology, don't get scared off by the documentation or anything like that. It's still very new, so I feel like now is the time to jump in.

And we've got interns who are, you know, maybe in their first year in college who are able to figure out this code, parse the documentation out and build networks. And they're building applications right now.

So, if you feel like you might be interested in this technology, just give it a try because it's very easy to get started. In about an hour, you can get set up and see everything that we've got available so far.

And at that point, you can decide, hey, I want to try this thing out or, you know, maybe it's not for me. But it doesn't take long for you to make that decision.

Don't be frightened by blockchain. It's very easy to get started with.
