

## Developer perspective series: Meet our developers 07/26/16

[ MUSIC ]

Dale Avery: Every morning I wake up at 7:00am, have breakfast. I don't drink coffee [CHUCKLES] which apparently is kind of strange.

Anya Derbakova: I have a red Hyundai Elantra, and I bought little Angry Birds, lined them up in the back. It's funny. People love it. Everyone thinks I'm an Angry Bird developer and I say great.

When you first sit down, you open your computer, and at that point, most people start to message you and see what's going on.

Avery: Typically that results in us kind of clustering around the lab working with other members of the group trying to solve whatever our problem is. After that, it's just heads-down trying to fix whatever issues we need to address for the day.

Sheehan Anderson: In IBM, this originally started with three of us sitting in a lab together and I don't think anyone knew what blockchain was. Now, the amount of excitement around it just boggles my mind.

Derbakova: We work a lot on GitHub, so on GitHub, it's a system where we track our issues and our code.

Avery: Usually by the end of the day, we've made some progress on some issues. We'll update our status on GitHub and then we go home for the day.
