

Developer perspective series: Revolutionary Blockchain Applications: Energy Utility App 07/26/16

[MUSIC]

Anya Derbakova: I think the cool apps that I've seen definitely came from the consensus hackathon in New York City. The winning entry was basically an energy utility management app on Hyperledger, so they were imagining a scenario where you could have like a remote area. So, for example, imagine a village and you know you have somebody who has a streetlight or somebody who has, you know, like a solar panel on their house. So, you could, for example, use your solar panel to kind of like save up some money and then power the streetlight.
